

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Sage's List of Portland, Conn., Birds.¹—The interest in the study of birds aroused by the exhibition of the Dr. William Wood collection of Connecticut birds in the rooms of the Hartford Historical Society has induced Mr. Sage, who is in charge of the collection, to print this list of birds as the most practical way of answering the frequently asked question "What birds can we find around our houses?" It is based on thirty years' observation and, as stated in a prefatory note, includes only the "birds seen to alight within the fenced enclosure about my house in the thickly settled portion of the town of Portland, Connecticut." No less than ninety-one species are given, each being briefly annotated as to the time and manner of its occurrence, twenty species having been found to breed. An additional list of ten species seen flying over is given.

The notes here recorded forcibly illustrate the unexpected results which may follow careful observations under apparently very unfavorable conditions, and show that even the restrictions of town-life need not debar one from the pleasures of bird study.—F. M. C.

Worcester and Bourns's Contributions to Philippine Ornithology.²—This paper consists of (1) 'A List of the Birds known to inhabit the Philippine and Palawan Islands, showing their distribution within the limits of the two Groups,' and (2) 'Notes on the Distribution of Philippine Birds,' the latter by Dr. Worcester alone. The first is a tabular list showing the distribution of the species among the islands. In the second paper the zoölogical affinities of the Palawan group are discussed, the conclusion being reached that their affinities are with Borneo rather than with the Philippines. The Philippines are then considered, each member of the group being passed in review, in respect to our knowledge of its ornithological fauna and its zoölogical affinities. A summary of conclusions is given, consisting of fifteen propositions. It is found that a "close relationship exists between the degree of difference in the avifaunæ of any two groups [of islands] and their present and past geographical relationship, those islands which have been longest and most completely cut off from their neighbors showing the highest degree of differentiation."

Steere's 'law of distribution' that "the genus is represented by but a single species in a place," is discussed at length, with a reëxamination of the facts now available, including many data Dr. Steere did not have. The result is a disagreement with Dr. Steere on a number of minor

¹ List of Birds found about my house at Portland, Conn. By John H. Sage, published by the Author. Pamphlet, 12mo. pp. 16.
